Elettrodi ad ago di tungsteno

Monopolari, ad alta resistenza termica, concepiti per recisione

Il tungsteno con cui viene realizzato l'ago elettrodo offre una resistenza alla temperatura superiore (punto di fusione 3400°C) e mantiene inalterate le caratteristiche di affilatura e forma anche in presenza di correnti di transito elevate.

Viene preferito rispetto all'acciaio utilizzato nei tradizionali elettrodi ad ago perché offre prestazioni costanti durante l'intera procedura chirurgica.

- Permettono di utilizzare l'elettrobisturi con potenze di erogazione estremamente ridotte
- Riduzione dei fumi chirurgici durante il taglio e coagulo dei tessuti
- Minor traumatismo sui tessuti
- Ridotta formazione di escara
